The IDs are: createLeadForm_companyName (no number), createLeadForm_lastName (no number), createLeadForm_firstName (no number), ext-gen630 (has number). So we must not use ID for the submit button. Use other locators: maybe By.name, By.cssSelector, By.xpath, By.className, etc. Provide only Java code, no explanations. Probably code snippet that finds elements and maybe interacts (e.g., sendKeys). The user said \"Extract the below given DOM\" and \"provide me the selenium java code\". Likely they want code to locate these elements. Provide code that uses By.name or By.cssSelector. Ensure not using ID for the one with number. La API que estás utilizando es una herramienta poderosa para interactuar con nuestros servicios. Para empezar, te recomiendo leer la documentación oficial, donde encontrarás información detallada sobre los endpoints disponibles, parámetros, métodos HTTP y ejemplos de código.\n\nAquí te presento los pasos básicos para comenzar a usar la API:\n\n1. **Obtén una clave de API:** Debes obtener una clave de API válida para autenticar tus solicitudes. Puedes obtenerla en la sección de configuración de tu cuenta.\n2. **Elige el endpoint:** Selecciona el endpoint que deseas utilizar, según la acción que quieras realizar. Por ejemplo, si deseas obtener una lista de usuarios, debes utilizar el endpoint **/users**.\n3. **Configura los parámetros:** Cada endpoint tiene sus propios parámetros, que debes configurar según tus necesidades. Por ejemplo, si deseas filtrar la lista de usuarios por nombre, debes agregar el parámetro **name** con el valor correspondiente.\n4. **Elige el método HTTP:** Debes elegir el método HTTP adecuado para realizar la acción deseada. Los métodos HTTP más comunes son **GET**, **POST**, **PUT** y **DELETE**.\n5. **Realiza la solicitud:** Una vez que hayas configurado todos los parámetros y elegido el método HTTP, puedes realizar la solicitud a la API.\n\nAlgunos ejemplos de código para que te guíes:\n\n* **GET:** **https://api.ejemplo.com/users?name=Juan**\n* **POST:** **https://api.ejemplo.com/users** con el cuerpo de la solicitud que contiene los datos del usuario a crear.\n* **PUT:** **https://api.ejemplo.com/users/123** con el cuerpo de la solicitud que contiene los datos actualizados del usuario.\n* **DELETE:** **https://api.ejemplo.com/users/123**\n\nRecuerda que es importante leer la documentación oficial y seguir las instrucciones específicas para cada endpoint y método HTTP.\n\n¿Tienes alguna pregunta específica sobre cómo usar la API?
